

Compare FusionAuth vs. Okta

FusionAuth and Okta provide similar tools for modern identity management including multi-factor authentication (MFA), single sign-on (SSO) across multiple applications, customizable communication templates, and localization support. Both also provide user reports and native segmentation options that go far beyond basic registration tools.

Unlike Okta, FusionAuth is free for unlimited users, and it is always single-tenant for secure data storage. FusionAuth also installs on-prem on any platform, anywhere for complete user data control.

Use the chart below to compare our features and read more in our [API documentation](#).

okta

 FusionAuth
