Compare FusionAuth to Auth0

FusionAuth and Auth0 have core features required by modern customer identity and access management solutions: Authentication for web and mobile applications, OAuth tokens & API key management, SSO, and MFA.

Unlike Auth0, FusionAuth is designed to be easy to install in minutes with single command and is 100% free for unlimited users. It also provides multi-platform, on-prem and private cloud deployment options, always single-tenant data storage, email localization, configurable password encryption, and detailed user reporting and analytics.

Compare our features in the chart below and read more in our **API documentation**.

	Auth0	FusionAuth
Free for Unlimited Users		✓
Authentication for Web and Mobile Applications	✓	✓
